

Introducing the Safe Pass System

Protect your most valuable assets:
your people, your customers and physical space

- **Recent events** have reshaped the way businesses handle personal safety. The Safe Space solution brings businesses a non-contact thermal temperature and safe pass solution that helps business owners to keep their workforce and customers safe.
- **The Safe Pass system** is a no-contact, fever inspection kiosk with advanced Analytics and facial detection options. Combined with a mobile or kiosk Q&A screening feature, adjacent digital signage options, and an integrated badge printer, it makes real-time temperature inspection easy, fast, and remarkably accurate.
- **The Android-based platform** makes it easy to integrate and connect with other Cloud-based systems -- like security locks. Use APIs for system integration to create alerts and other triggers to display on screen. Manage multiple endpoints remotely to make login, configuration, and maintenance hassle free. The dashboard can be accessed remotely, providing daily reports, trending, and alerts based on set KPI's.

SAFETY MADE SIMPLE

- No-contact remote forehead temperature inspection
- Multi-point temperature: Stop, Scan, View and Log instantly, with output +/- 1 second
- Works by facial detection, with or without mask
- If individual exceeds temperature limits, notification can happen – and delivered via email or SMS
- Works immediately after the device is powered on

THE AI ENGINE IS THE DIFFERENCE

- Connect and synchronize multiple points of entry to a single, unified dashboard
- Customizable to conform to Safe Space, HR, Legal, Privacy or other Corporate Compliance requirements
- AI-enabled with rules engine so it learns patterns, and can trigger smart alerts
- Dashboard provides daily reports, trending, and alerts based on set KPI's – and can be accessed remotely

EASY API/3RD PARTY HARDWARE INTEGRATION

- When enabled, the engine creates event logs according to any compliance – and stored in the Cloud
- Other platform analytics, device or access controls can be integrated
- Solution incorporates Remote Device Management and over-the-air update
- Remote troubleshooting allows hassle-free maintenance and support through a SaaS model
